Takada-Kanki Laboratory
Housing and Environmental Design, Graduate School of Urban
Environmental Engineering, Kyoto University, Japan,

Miyagawa Seminar,
Dept. of Environmental System, Wakayama University, Japan

Patra – Pala Foundation
and
Jogja Heritage Society

Saujana heritage or cultural landscape, is the inextricable unity between nature and manmade heritage in space and time or the variety of interactive manifestation between manmade heritage and natural environment. The interaction of nature and culture has become a new perspective in global discourse of sciences especially those which concern with heritage conservation started in the end of the 80's.

In Indonesia the discourse on cultural landscape has not yet developed. It is even realized that in education the issue has not been a learning material whereas in fact, Indonesia from Sabang to Merauke is a mosaic of one of world's biggest cultural landscape diversity that needs interdisciplinary handling. That is why conservation and management of cultural landscape are very urgent things to do.

In 2003, Indonesia Network for Heritage Conservation (INHC) in collaboration with International Council on Monuments and Sites (ICOMOS) Indonesia and Ministry of Culture and Tourism in Indonesia Heritage Year 2003 (theme: Celebrating Diversity) declared Indonesian Charter for Heritage Conservation which among other shares the understanding that:

1. The heritage of Indonesia is the legacy of nature, culture and *saujana*, the weave of two. Natural heritage is the construct of nature. Manmade heritage is the legacy of thought, emotion, intentions, and works that spring from over 500 ethnic groups in *Tanah Air Indonesia*, singularly, and together as one nation, and

from the interactions with other cultures throughout its lengths of history. *Saujana* heritage is the inextricable unity between nature and manmade heritage in space and time.

2. Cultural heritage includes both tangible and intangible legacies;
3. Heritage, bequeathed from the generations that precede us, is the vital foundation and initial capital for the development of the Indonesian nation in the future, and for these reasons, must be conserved and passed along to the next generation in good condition, without loss of value, and if possible with an enhanced value, to form heritage for the future

Meanwhile Borobudur UNESCO Expert Meeting held in July 2003 stated that a study on Borobudur cultural landscape is urgent to be conducted and started in 2004 Indonesian Government through Department of Culture and Tourism had prepared 2nd Stage of Borobudur Restoration emphasized on *Intangible Cultural Heritage* and community empowerment.

In order to response various needs on conservation development, in scientific or practical needs, Center for Heritage Conservation, Department of Architecture and Planning, Gadjah Mada University in collaboration with Takada-Kanki Laboratory Housing and Environmental Design, Graduate School of Urban Environmental Engineering, Kyoto University, Japan, Miyagawa Seminar, Dept. of Environmental System, Wakayama University, Japan and Jogja Heritage Society for the second time organize a Field School with case study of Menoreh-Borobudur area, an area with divers heritage from local to class world heritage.

OBJECTIVES

The objectives of the Field School program in general are:

- To give participants a comprehension on conservation and management of cultural landscape, in which include historical buildings, setting and culture system, living culture and other natural environment components
- To enhance participant skill in implementing concepts, methods, conservation process and landscape management in field actual cases.
- To enhance participant interest in cultural landscape conservation.
- To give participants experience in doing a research on cultural landscape conservation directly in the field.

The objective of Field School program in specific is emphasized on enhancing participant skill in implementing techniques of cultural landscape conservation in which include inventory, documentation and presentation to generating design guidelines in a particular area.

TIME AND VENUE

The program is organized for 6 days started on 12 to 16 September 2004 in Borobudur –Menoreh Mountain Range, Magelang Regency, Central Java. During the program participants will stay in homestays in Candirejo Village, Borobudur Subdistrict, Magelang Regency, Central Java

ACTIVITY PROGRAM

During 6 day program, participants will experience fun learning activities such as:

- a. Field School
